

RMF PROGRAMMER

**SPECIFICATIONS**

Fiberglass enclosure meets Nema ratings 3, 3r, 4, 4x, 12 and 13.

The controller provides total control of the system's filtration and regeneration cycles, and provides all necessary equipment interlocks and timing mechanisms to execute the filter program.

The controller is designed so that there is no day to day involvement with the operation of the filter system.

The controller PLC unit controls the functions of the bump cycle, pre coating of the filter elements, filter pump start/stop interlock and open/close actuation of pneumatically operated valving.

- 120V - Electrical requirements: 120VAC-1Ø-60Hz, 20 amp circuit protection

ONE REQ'D PER FILTER
