

VACUUM TRANSFER SYSTEM

NOTE!
ALL FITTINGS, VALVES AND HARDWARE AS SHOWN IS
SCH 80 PVC AND ARE SUPPLIED BY NEPTUNE-BENSON™.

Filter MUST be grounded to help slow corrosion due to stray current.

NOTE:

Your Defender® Filter and most of its accessories are acceptable for unprotected installations exposed to the elements. The vacuum transfer unit and the compressor require supplementary covers to protect these units from the elements if installed in an unenclosed environment. Neptune Benson™ recommends a minimum enclosure of an open shelter with a roof to provide protection from direct exposure to rain and snow.
